

Instructions for viewing properties in Google Earth.

You must download and install Google Earth into your computer to view map files. There are limitations to the program if your computer does not have a sufficient graphics card. If you cannot view the file, please call the Planning division with an address to find out if the property is located within the Fairfield Redevelopment Project Area at (707) 428-7461.

1. Download and install Google Earth.
2. Download the Google earth file you need. (Kml file)
3. You can either open the file automatically or save it to your computer.
4. Once you open the file, Google Earth will automatically zoom to the file boundary.
5. Depending on your graphics capability on your computer, you will either see colored transparent areas or colored outline areas.
6. To find out if your address is within the area, type in your address in the top left corner box (Fly to tab) and click on the magnifying glass.
7. Google earth will then zoom to that address.
8. You may need to zoom out to find if your property is within the boundaries.
9. The area is identified as any colored filled in area or within the colored outlined areas. (Some computers may only show outlines instead of a filled transparent layer)
